

<https://imanudin.net/2014/12/25/relay-tips-based-on-userdomain-receiver-on-zimbra-8-5-8-6/>

<http://shahzadlinux.blogspot.com/2016/08/how-to-set-transport-in-zimbra.html>

crear: /opt/zimbra/common/conf/transportfile con esta estructura:

```
mail-archive.uclv.edu.cu :[10.12.112.102]
```

compilarlo

```
/opt/zimbra/common/sbin/postmap /opt/zimbra/common/conf/transportfile
```

mirar opciones actuales

```
zimbra@mail-mta-2:~/common/conf$ zmprov -l gs `zhostname` | grep -i  
zimbraMtaTransportMaps  
zimbraMtaTransportMaps: proxy:ldap:/opt/zimbra/conf/ldap-transport.cf
```

incluirlo en la configuracion del servidor

```
zmprov ms mail-mta-2.uclv.cu zimbraMtaTransportMaps  
"lmbd:/opt/zimbra/common/conf/transportfile,proxy:ldap:/opt/zimbra/conf/ldap-  
transport.cf"
```

comprobar

```
zimbra@mail-mta-2:~/common/conf$ zmprov -l gs `zhostname` | grep -i  
zimbraMtaTransportMaps  
zimbraMtaTransportMaps:  
lmbd:/opt/zimbra/common/conf/transportfile,proxy:ldap:/opt/zimbra/conf/ldap-  
transport.cf
```
